

it. That is not all they did. These powerful civilizations each had their own form of government, religion, and learning. The Maya, Aztec, and Inca empires rose to power thousands of years ago.

The Inca's had the best communication system of their time. They were able to communicate with their empire because of their road system. They also conquered so they could build and expand their empire. They were successful farmers. The Aztec's also farmed.

The Aztec gave us many farming ideas. They had floating gardens. Floating gardens are gardens that are on the water most of them had food on them. Some of them had flowers. They used irrigation. Irrigation is when you bring water to the dry land. They also had terraces which are were the ground dips like hills they used them to farm. They used them to keep water from washing their plants away. The Aztecs were really good farmers, but the Mayans also farmed.

Mayans were good at farming and produced surplus so some people could specialize in math, stars, and other arts. Mayans also built large cities and buildings. They also weave baskets. The Mayans also made cool jewelry and they were good at farming too like the others. They lived on the coast of the Caribbean in Central America. Those are some things the Mayans are known for.

Some powerful empires existed a long time ago that gave us many things we still use today. They are the Incans, Aztecs, and Mayans. The Incans had one of the best road systems of their time, that's how they communicated so well. The Aztecs helped us know better farming practices and used irrigation and terraces. The Mayan people specialized in math and studying the stars which helped them make an accurate calendar. These are some of the ways that the Aztecs, Incans and Mayans have helped us today.
